PHYSICAL DESCRIPTION:

This 3-part Federal style building consists of a stone walled core, a stone addition on the north end, and a frame addition on the rear of the house. With the rear frame addition, the house, which now serves as the offices for PAREC Homes, Inc., is T-shaped. The core consists of a three story, three bay wide structure with an asphalt covered, end gabled roof. The roof's eaves exhibit a partial return on the gabled ends. There are chimneys on each end: stone chimney on the north end and a smaller brick chimney on the south end, both flush with the end walls. The masonry core consists of un-coursed stone, which was probably covered with stucco when constructed. Fenestration consists three bays of 6x6 sash windows on the first and second floors and 3x3 sash frieze band windows on the third floor. Molded wooden lintels are located over the first and second floor windows. Paneled shutters flank the windows on the first floor; louvered windows are on the second floor. A single vertical row of windows serving all three floors is found on the southern end. The entrance consists of a door on the left side of the front facade. Most notable is the square portico supported by Roman Tuscan columns and featuring a three-tiered entablature and two modillion courses.

The first addition consists of an end gabled, two-story unit with a standing seam tin roof. A slight cornice return is evident on the north end. A single, flush, banded stone chimney is located on the northern end. The fenestration and stonewalls are similar to that of the core. The addition is set back from the facade of the core.

The rear addition is a 1.5 story frame addition with a standing seam tin roof. Walls are clad in weatherboard. Notable features are the gabled wall dormers.

The core measures $\approx 30' \times 15'$; with the additions, the building measures $55' \times 50'$.

Classification: Class I
